Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary

Application No.

10/071,587

Applicant(s)

JOSEPH

Examiner

LeChi Truong

Art Unit

2126

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 18 October 2004.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☐ Claim(s) 1-27 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-27 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
- Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
- Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. §§ 119 and 120

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- * See the attached detailed Office action for a list of the certified copies not received.
- 13) ☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. § 119(e) (to a provisional application) since a specific reference was included in the first sentence of the specification or in an Application Data Sheet. 37 CFR 1.78.
- a) ☐ The translation of the foreign language provisional application has been received.
- 14) ☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. §§ 120 and/or 121 since a specific reference was included in the first sentence of the specification or in an Application Data Sheet. 37 CFR 1.78.

Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO-1449) Paper No(s) _____
- 4) ☐ Interview Summary (PTO-413) Paper No(s). _____
- 5) ☐ Notice of Informal Patent Application (PTO-152)
- 6) ☐ Other:

DETAILED ACTION

1. Claims 1-27 are presented for the examination.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1, 8, 15, 22-24, 26 are rejected under 35 U.S.C. 103(a) as being unpatentable over Moeller et al (US. Patent 5,473,777) in view of Sitbon et al (US. Patent 5,568,487).

3. As to claim 1, Moeller teaches the invention substantially as claimed including: a group of application (application 130,132, 134, col 6, ln 48-50/ Fig. 1), a first application programming interface (function calls, col 6, ln 51-53), a second application programming interface (procedural function calls, col 10, ln 30-31), selecting application from a group of application adapted for working (col 6, ln 9-15), conjunction with application programming interface to gain access (col 6, ln 45 -54), the first application program interface adapted for permitting the applications to gain access to the networking(col 3, ln 52-58).

Moeller does not explicit teach a second application programming interface adapted for precluding the applications from accessing, wrapping the selecting application for allowing the selected applications to access the network via the second application program interface.

However, Sitbon teaches a second application programming interface adapted for precluding the

Art Unit: 2126

applications from accessing (when the socket interfaces calls have no correspondence with the XTT interface, col 5, ln 50-55/ the interface calls must be converted in order to access to the network because this interface calls preclude to access the network, col 1, ln 40-46), wrapping the selecting application for allowing the selected applications to access the network via the second application program interface(the various calls SC+SY are then rerouted to the wrapper W .. the wrapper w is to automatically convert the address... after converting the calls SC+ SY indented for the TCP/ IP network are transmitted to the XTI interface, col 3, ln 5-14).

4. It would have been obvious to one of the ordinary skill in the art at the time the invention was made to combine the teaching of Moeller and Sitbon because Sitbon's wrapping the selecting application for allowing the selected applications to access the network via the second application program interface would allow the TCP/IP network access to the OSI/CO network that does not require modifying the source code.

5. As to claims 8, 15 and 22-24, they are apparatus claims of claim 1; therefore, they are rejected for the same reason as claim 1 above.

6. As to claim 26, Sitbon teaches the application program include a word processor application, a database program, a browser program, a development tool program, a drawing program, image editing program, and a communication program (col 1, ln 40-45).

7. Claims 2-6, 9-13, 16-20, 25 are rejected under 35 U.S.C. 103(a) as being unpatentable over Moeller et al (US. Patent 5,473,777) in view of Sitbon et al (US. Patent 5,568,487) as applied to the claim 1 above and further in view of OPT (Optimizations).

Art Unit: 2126

8. As to claim 2, Sitbon teaches compressing data that provide compression of data associated with the applications (col 3, ln 9-12).

9. Moeller and Sitbon do not teach a portable executable image. However, OPT teaches a portable executable image (a portable executable image, page 2, ln 24-26/ page 3, ln 16-19).

10. It would have been obvious to one of the ordinary skill in the art at the time the invention was made to combine the teaching of Moeller, Sitbon and OPT because OPT's a portable executable image would decrease the image size and increase the program speed at a cost of increased link time.

11. As to claim 3, Moeller teaches extractor the data in the PE image (col 19, ln 67 to col 20, ln 1-5/col 22, ln 43-45/ col 23, ln 35-37/ col 24, ln 10-15).

12. As to claim 4, Moeller teaches the extractor code is further adapted for interfacing with the second application program interface (col 9, ln 1-5). The extractor code is wrapper for implementing the API of the class library.

13. As to claim 5, Moeller teaches the wrapper is further adapted for identifying a location in memory (col 24, ln 28-32).

14. As to claim 6, Moeller teaches the location in memory is where a routine is stored for allowing the selected applications to access the network (col 9, ln 17-20).

15. As to claims 9-13, 16-20, they are apparatus claims of claims 2-6; therefore, they are rejected for the same reasons as claims 2-6 above.

16. As to claim 25, OPT teaches a header, a stub program, a file signature, a text section header, a .bss section header, a .rdata section header, and a .debug section header (the sections in the portable executable image, page 2, ln 24).

17. Claims 7, 14 and 21 are rejected under 35 U.S.C. 103(a) as being unpatentable over Moeller et al (US. Patent 5,473,777) in view of Sitbon et al (US. Patent 5,568,487) as applied to the claim 1 above and further in view of Alexander et al (US. Patent 6,748,343 B2).

18. As to claim 7, Moeller and Sitbon do not teach a user to select the application to be allowed to access the network. However, Alexander teaches a user to select the application to be allowed to access the network (a user interface for obtaining a user selection of client, premises, location, monitoring device... and to transmit the data to the processing server, col 19, ln 53-56).

19. It would have been obvious to one of the ordinary skill in the art at the time the invention was made to combine the teaching of Moeller, Sitbon and Alexander because Alexander's a user to select the application to be allowed to access the network would transmits the user selection to a processing server which configures one or more monitoring devices.

20. As to claims 14, 21, they are apparatus claims of claim 7; therefore, they are rejected for the same reasons as claim 7 above.

21. Claim 27 is rejected under 35 U.S.C. 103(a) as being unpatentable over Moeller et al (US. Patent 5,473,777) in view of Sitbon et al (US. Patent 5,568,487) as applied to the claim 1 above and further in view of Michael Norton (Basic of network Segmentation: Switching and bridging).

Art Unit: 2126

22. As to claim 27, Moeller and Sitbon do not teach the network utilizing a network card.

However, Michael teaches (a network card will attempt one more to transmit the frame, sec:

Consuming bandwidth on a single segment, ln 4-5).

23. It would have been obvious to one of the ordinary skill in the art at the time the invention was made to combine the teaching of Moeller, Sitbon and Michael because Michael's network card would listen to the physical layer for the communication on the OIS network.

Response to the argument

24. Applicant's arguments filed 10/18/2004 have been considered but are moot in view of the new ground(s) of rejection. Applicant amended the claims. Moeller, Sitbon's references meet the amended claims.

25. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Art Unit: 2126

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to LeChi Truong whose telephone number is (571) 272 3767. The examiner can normally be reached on 8 - 5.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Meng-Ai An can be reached on (571) 272-3756. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIP. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIP system, contact the Electronic Business Center (EBC) at 866-217-9197(toll-free).
